

## **IS4101 IT Auditing**

### **Quiz 2**

#### **Auditing Network Security Controls**

##### **Objective**

The objective of this quiz is to understand network security risks, controls, and audit procedures by applying auditing concepts to a practical business scenario.

##### **Scenario**

A company called “NetSecure Solutions Pvt Ltd” provides online services to customers through its website and internal network system. Employees use the company network to access emails, databases, and financial systems.

Recently, the company has experienced several network security problems such as unauthorized users attempting to access the system, the website became unavailable due to a Denial of Service (DoS) attack, sensitive customer information was transmitted without encryption, some employees accessed confidential company files without permission, and network logs were not regularly monitored. Management has decided to conduct an IT audit on network security controls.

##### **Task**

As an IT auditor, explain how you would evaluate the network security of NetSecure Solutions.

1. Identify and explain at least 4 network security risks from the scenario.
2. Explain how the following controls can help protect the organization.
3. Explain the main audit objectives related to network security.
4. Describe how you would perform audit procedures to evaluate:
5. Suggest at least 4 recommendations to improve the company’s network security.

##### **Submission Guidelines**

- Length: 1 - 2 pages
- Include practical examples from the scenario
