

OOP (IS2102/ SE2104/ DS1102) – In-Class Assignment 02

Task 1:

- Create a `Student` class with attributes: `name`, `studentId`, `grade`.
- Implement a constructor and a method `displayStudentDetails()`.
- Create two `Student` objects in `main` and display their details.

Task 2:

- Create a subclass `HighSchoolStudent` that extends `Student` and adds `stream` (e.g., Science, Commerce).
- Override `displayStudentDetails()` to include `stream`.
- Create a `HighSchoolStudent` object and display its details.

Task 3:

- Make `grade` private in `Student` and add `setGrade()` and `getGrade()`.
- Modify and retrieve `grade` using these methods in `main`.

Task 4:

- Create an interface `Person` with a method `introduce()`.
- Implement it in `Student` and `Teacher` with different messages.
- Create objects and call `introduce()` in `main`.

Task 5:

- Overload `displayStudentDetails()` to accept an additional parameter `rank` and display it.
