

Unix & Shell Programming Lab Sheet

1. Create a project directory structure named OS_Project.

```
OS_Project/  
├── src/  
├── docs/  
├── backup/  
└── scripts/
```

2. Create text files inside the src directory.
3. Copy files into the backup directory.
4. Display detailed file listing.
5. Compress the project directory.
6. Write a shell script to concatenate two strings and display the length.
7. Write a shell script to compare two strings.
8. Write a shell script to find the maximum among three numbers.
9. Generate the Fibonacci series for n terms.
10. Create a menu-driven arithmetic calculator using a case statement.
